CUMULATIVE SUBJECT INDEX

Uses

The SUBJECT INDEX is used to find all items about a subject using significant indexing terms (key terms) added by BIOSIS indexers. Key terms are arranged alphabetically and are followed by a second list of terms that further define the context of the key terms.

Features

- The Subject Index displays significant concepts discussed in the paper (key terms) followed by additional context terms, including drug modifiers (when appropriate), Major Concepts (initials capitalized) discussed in the original document, and other terms that further describe the context of the key term in the original document.
- Each entry is followed by Major Concepts and additional context terms where they apply.
- If the key term is assigned a drug modifier, the drug modifier will be the first term in the context terms.
- For entries sharing the same drug modifiers and/or primary Major Concept listed first in the indexing, subsequent entries will be indented. For entries sharing all the same context terms, indexing terms will not be repeated and only reference numbers will appear.

SUBJECT INDEX (Specific Words)		
	Key term	Ref. No.
	Context terms	
Major Concept	American matsutake (Basidiomycetes)	
	→ Horticulture/ Agriculture/ <i>Tricholoma magnivelare</i>	621689
	Daunomycin	
	→ antineoplastic-drug/ Hematology/ Oncology/ Pharmacology	785216
Drug Modifier	fungi (Fungi)	
	Ecology/ Infection/ endophyte.....	529001
	ozone	
	Climatology/ Environmental Sciences/ Pollution/ atmospheric pollutant	305670
	<i>Tricholoma magnivelare</i> (Basidiomycetes)	
	Horticulture/ Agriculture/ American matsutake	621689
		Context Term
	N=New Taxa †=Fossil Taxa R=Review Article ?=Uncertain Identification	

- All significant words used to describe the original document appear in the Subject Index, including genus species, common names, geographical regions, and scientific and commercial drug names.
- The appropriate taxonomic category appears in parentheses beside key terms that are organism names. Locate this taxonomic category in the Organism Index for more information in broadening your search.
- The appropriate higher geographic category appears in parenthesis beside geographical key terms.
- A question mark (?) following a key term that is an organism name indicates uncertain identification.
- When appropriate, modifiers for Review Article (R), New Taxa (N), and Fossil Taxa (†) appear in the right margin following the reference number.
- Key terms that are (or begin with) numbers (e.g., chromosomes, drug codes, cell lines) appear after the final entry for "Z" in the index.

How to Search

1. Determine subject words to be searched. Check spelling, adjectival forms, and synonyms.
2. Locate words alphabetically in the key term position.
3. Note the Major Concepts, drug modifiers, and other context terms beneath the key term for additional information. Note modifiers for review articles, new taxa, and fossil information.
4. Use reference numbers to find individual entries.
